

**AMENDMENTS TO THE SPECIFICATION**

Please amend the paragraph beginning on page 1, line 10, with the following paragraph.

--Extensive use is being made of moldings of automobiles, for example, having decorative laminate films giving a metallic gloss bonded on their surfaces. As such a laminate film, in the past, as shown in for example FIG. 5, there has generally been known a film 50 comprised of a surface substrate 51 made of a transparent polyester-based resin, a metal vapor deposited layer 52 formed by sputtering of aluminum, chromium, or an alloy of the same on the back surface of the surface substrate 51, and a polyvinyl chloride or other backing material 54 integrally bonded to the back surface of the metal vapor deposited layer 52 via an adhesive layer 53.--
